

## PAULINE PATERSON

CO-DIRECTOR

The Vaccine Confidence Project team, London School of Hygiene & Tropical Medicine

I am co-director of The Vaccine Confidence Project team with Dr Heidi Larson.

I have been researching issues of public confidence in immunisations since 2010. Specific research activities include qualitative analysis of parental reasons for not vaccinating their child with influenza vaccine in England, analysis of concerns surrounding HPV vaccine in India and Japan, and a systematic review on public trust in vaccination.

I am a member of the National Institute for Health Research (NIHR) Health Protection Research Unit (HPRU) in Immunisation in partnership with Public Health England.

I have also researched HIV risk perception in sub-Saharan Africa, and feasibility and acceptability of PrEP in Kenya, and carried out a systematic review on conceptualizations of uncertainty and risk, and implications for uptake and use of biomedical HIV prevention technologies in sub-Saharan Africa.

I have a PhD in Epidemiology, an MBA, and an MSc in Environmental Technology from Imperial College London. My MBA project consisted of two systematic reviews and a case study in Thailand, in collaboration with WHO, exploring health system preparedness to changes in malaria and dengue fever epidemiology as a result of climate change.
