This study identifies three key gaps in the current provision of hunger-relief services in Singapore, backed by five holistic recommendations.
Understanding Food Insecurity in Singapore

This research revealed 3 key challenges:

1. Lack of Quality of Nutritious Food

“Although poor health is often regarded as an effect of food insecurity, findings from the qualitative interviews suggest that it may also act as a precursor to rising food insecurity.”

2. Inefficiencies in the Food Support System

“While the organisations interviewed reached an estimated 7,000 households, these were not unique households, as some received support from more than one organisation.”

3. Difficulty in Addressing Root Causes

“Food support is seen as a temporary mechanism to offset or lighten households’ financial burden rather than improve their financial situation.”
Understanding Food Insecurity in Singapore

Our 5 Holistic Recommendations

1. Greater Coordination and Targeting of Food Support
2. Prioritising Nutritious and Quality Food
3. Community-Based Food Support
4. Increasing Education
5. Overcoming Food Insecurity through a Food Systems Approach
Are we doing good well?
