

Launch of the Family Research Network (FRN) and Forum on "Marriage and Fertility"

18 September 2008
IPS Conference Room

Where is Baby? A Sociological Insight to Fertility Decisions

Assoc Prof Paulin Straughan
Deputy Head, Department of Sociology
Vice Dean (Undergraduate Affairs)
Faculty of Arts and Social Sciences
National University of Singapore

Where is Baby?
A Sociological Insight to
Fertility Decisions

A/P Paulin Straughan
Department of Sociology
National University of Singapore

Overview

- Healthy environment yields healthy birth rate?
- Government family policies – Do they Work?
- Social & cultural barriers to fertility

Macro Factors & TFR

- Multiple regression model predicting TFR using percentage growth in economy, female labour force participation rate, male labour force participation rate
- TFR correlated positively with economic growth + negatively with female labour force participation rate
- Adjusted R-square = 56.3%

Awareness of 2004 Pro-Family Government Policies

- 39% Yes, I have read up on them
- 37.1% Yes, I heard about them but do not know the details
- 23.9% No, I have not seen the announcements

(n=1510)

2004 Pro-Family Policies

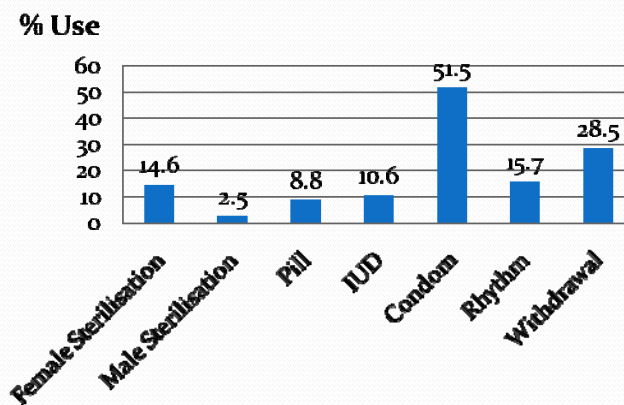

- 23.9% not aware of policies – concentrated among those with no children or 1 child
- Those with 3 or more children more likely to believe that pro-family policies will help increase the TFR
- Evidence suggests that pro-family policies may encourage those with 1 child to have more children, but not those with no children

Surveying Individuals – Feedback from Married Women

- Why survey women?

Who Makes Fertility Decisions?

- 53.8% actively avoiding pregnancy

Surveying Individuals – Feedback from Married Women

- 26% indicated positive effect of new pro-family policies on personal fertility decision
- Logistic model to predict likelihood to have child in future
- Nagelkerke R-square = 0.631
- Prediction performance of model = 90% accuracy

Who is Likely to Have Child?

- ✓ Do not embrace intensive mothering
- ✓ Childrearing as extrinsic returns
- ✓ Higher marital satisfaction
- ✓ Worked full-time
- ✓ Had fewer children
- ✓ Younger
- ✓ Not Chinese

The Practice of Family

Doing Family – Doing Work

The Practice of Family

		MALE	FEMALE
HOME CARE	Self*	2.2	3.4
	Spouse*	2.9	1.9
	Shared*	2.6	2.2
CHILD CARE	Self*	0.7	3.3
	Spouse*	2.6	0.5
	Shared*	3.3	2.9

11 Home Care Items

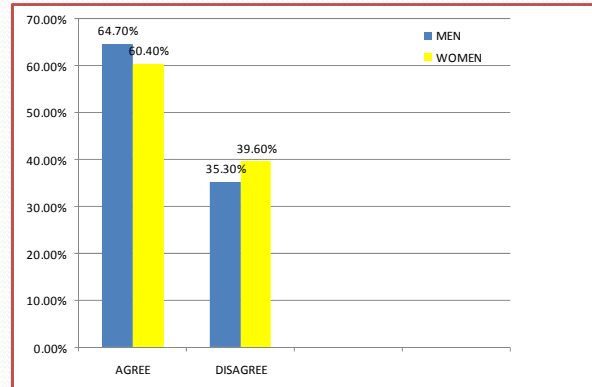

10 Child Care Items

In the Dual-Income Home

	Gender	Mean (Domestic Items)
• home care by self*	Male	2.2752
	Female	2.9049
• homecare by spouse*	Male	2.2936
	Female	1.8804
• home care shared*	Male	2.8104
	Female	2.4076
• childcare by self*	Male	.7584
	Female	2.8016
• childcare by spouse*	Male	1.8624
	Female	.4674
• childcare shared	Male	3.1713
	Female	2.9076

Ideologies of the Family

- It is better for the husband to be the breadwinner and the wife to be the homemaker

Men's Roles – Cultural Shift in Expectations of Fatherhood

	% Agree
A good mother must be on-call 24 hours a day	53.5
The mother is the best caregiver	87.3
Fathers and mothers are equally important as caregivers	98
If a child behaves badly, it is usually the mother's fault	7.6
A good mother puts her child's needs above her own	84.2*
As long as a man is able to provide financially for his children, he is a good father	30.5*

Moving Ahead

- Identify the root cause of the problem
- Insights from the study:
 - Gender roles differentiation – costs to women higher than to men
 - How to avoid a gender-bias?
 - Work-Family Interface
 - How to achieve a better work-life balance?
